Hi David,
Here the EPA's current chronology of events.

<http://www2.epa.gov/goldkingmine/gold-king-mine-chronology>

It states:

8/7/2015

- ASPECT flyover (initiated at 7:30 a.m., found extent of plume at 8:30 a.m. map pending).
- Coordination call with R6, R9 and HQ. Region 9 was planning to sample a Reservation.
- Preliminary results for sampling and monitoring is expected to be received
- As of 8:30 a.m. the plume had not yet reached New Mexico.
- OSC in the field reports that private residential wells were showing yellow ERRS support for alternative water (distribution began that evening).
- EPA requests information from USGS regarding a stream gauge on Cemen reports that the release was larger than 1,000,000 gallons.
- Region 8 receives a call from FEMA R8 because their tribal liaison was ge Navajo Nation and EPA Region 8 provided Region 9's OSC contact info t
- EPA Region 8 holds call with the Region 8 Regional Response Team (incl Department of Interior from R6 and R8, and multiple Forest Service repre

This is an incomplete and misleading characterization of events.

Do you know when this will be corrected?

hope all is well

Sincerely

Paul Davis

Paul. I owe you a great thank you for your prompt thinking that brought this information to us. Without your action we would still be guessing. We wanted that official verification from USGS to cover our backside. sorry the public acknowledgment went elsewhere but we will tell the story of what really happened. Thanks again

Paul as you might guess I do not have any say in what the RA says...they know who generated the data but wanted it confirmed by the USGS I will see they get this message and they can go from there...
thanks again...I know who the credit goes to and your analysis was correct...

Hi Hays,
I just listened on line to the public meeting in Durango and heard the EPA spokesman (Shawn McGrath) say the new estimate is 3 million gallons based on the USGS gaging station at Cement Creek.

Only one small issue — he gave the USGS credit for realizing this station has caught the plume and gave the USGS credit for doing the analysis.

Not that I care much, but I do care a little about getting credit for the analysis.

thanks and I hope all is well

Paul Davis

Thank you very much for the timely information we will check other sources our estimate was based on the estimated volume of the adit evacuated by the water.

Thanks again

Dear Mr. Griswold,
I just performed a similar analysis for the USGS gaging station on Cement Creek.

I get just over 3 million gallons.

Now it is possible I have a systematic error so these estimates need to be independently reviewed

hope this helps,

IF you want or need to talk to me I will be traveling to Farmington, New Mexico this afternoon but you can call me at 505-688-6053

Sincerely,

Paul Davis

Dear Mr. Griswold,
We spoke briefly in the Durango Coffee Shop this morning. I am a hydrologist (mainly groundwater) and, using the USGS gaging station at Silverton, estimated the quantity of Wednesday's release.

Here is the hydrograph from the days before, during and after the spill. (<http://waterdata.usgs.gov/nwis/uv?09359020>)

<PastedGraphic-1.tiff>

The spill clearly shows up on August 5th.

I took the period of record from late on the 4th to the evening of the 5th and estimated the trend of the base flow (flow that would have occurred without the spill. I then subtracted that estimated base flow from the flow during the spill. Next integrated (added up) the flow under the remaining curve (which is just a curve of the spill minus base flow.

I get about 420,000 cubic feet (the number I mistakenly told you this morning as gallons) or about 3,160,000 gallons. See the attached spreadsheet.

A WORD OF CAUTION — this analysis was done in a hurry and must be checked by someone else.

Also - a cross check of the analysis could be performed by analyzing USGS gaging station records from their station on the Animas at Durango.

I have time later today if you want to meet and discuss this analysis.

I do hope it is useful to you.

Sincerely,

Paul Davis
